TANCREDI TRUGENBERGER
SENIOR FRONT-END DEVELOPER

tancredi@pxld.co.uk
+44 7593067780
LinkedIn
GitHub

Full-stack developer with strong front-end, product and design focus.

I seek creative environments where a product mindset, as well as testing and quality of delivery are valued, engineers do not shy away from finding innovative solutions and are able to be problem solvers rather than just executing tasks.

WORK

Artillery.io Mar 2023 - Present
Senior Product Engineer

Feature development on the cloud platform front-end.
Performance / network traffic optimisation.

`JavaScript, SCSS, Django`

ENDORSEMENTS

Livia van Strydonck Head of Product at Lendable

From working at Lendable

I've had the pleasure of working with Tanc at Lendable and at Kano across various different projects. He is a fantastic designer and a brilliant software engineer. I know I can rely on Tanc to deliver beautiful work, fast and with a lot of humour.

Mike Borozdin Senior Software Engineer at Tractable

From working at Lendable

Tanc is a unique blend of a talented designer and an incredibly proficient software engineer. When I joined Lendable I was really impressed with the projects Tanc built. And when I say 'built' I mean he made beautiful graphic design, created maintainable software architecture, implemented it elegantly in the code, and put up a Continuous Integration pipeline. I don't know that many people who can do so many things and do them well. And did I tell you that he always thinks about the user and the product? Well, now you know!

Riccardo Cocetta Director of Engineering at Okta

From working at YLD, Kano Computing

I worked with Tanc at Kano and YLD, and knowing him made me realise of the existence of a new breed of Front-End developers: he can think of amazing UI/UX and implement them himself with I speed and precision I couldn't imagine before. I have witnessed him excel both in one-man shows and in teams, where I could entrust him as a partner with high level objectives and rely that he would drive the team to deliver on those. If I could, I would hire Tanc to work with me at any company ... but he doesn't always want to join.

Edward Cooke Co-founder & CEO at Memrise

From working at Memrise

Tanc's an extremely gifted designer/developer, with a flair for producing beautiful things at speed. His skill and experience go far beyond his age. He's passionate, insightful and iconoclastic. All in all: a very talented young entrepreneur.

Alex Klein CEO & Co-founder at Kano Computing

From working at Kano Computing

Tancredi Trugenberger is a one-off – a uniquely talented, thoughtful, and energetic technologist – by quality and sheer irrepressibility, he is in a league all his own. At Kano, Tanc brought an artist's eye to exceedingly difficult projects, all on short deadlines, and consistently wowed myself and his colleagues. He has extraordinary product instincts and a development approach that allows him to test, explore, and validate in the time it takes most engineers to brew the coffee. We're glad to have him contributing to the Kano Product and can fully endorse any of his outside ventures as well.

Sanford Dickert Founder at OWLR

From working at BraveNewTalent

Describing Tanc is like describing bottled lightning - a person who comes with an idea out of the sky and, in an instant, is able to create a solution that we can see, touch, react with and simply benefit from. He is a triple threat - with a fussion-powered engine behind him. Worth a gander.

PROJECTS

Fantasticon

An open-source command-line tool to build icon fonts programmaticaly.

github.com/tancredi/fantasticon ›

Olk

Android casual puzzle game built with Unity in C#.
